

CONCEPT

LAZY BECOME FOR COPY-ON-WRITE

Initial scenario in black, then follow the sequence of red numbers

1. IMAGE 2 writes to base object zB
2. Copy base object to apply write to z2
3. Set base object zB lazy become to indirect table entry 1
4. Read base object
5. Follow lazy become through indirect table
6. Update reference to copied object
7. Read base object
8. Follow lazy become to indirect table.
Entry needs to be created pointing back to base object zB, or maybe an dynamic optimisation to copy into IMAGE 1
